Day 084 | Unit 06 | Teacher plan

Understand and Use Ratios and Rates

Compare Unit Rates and Prices

Standards: 6.RP.A.3b

Learning target: I can compare unit prices to find the better buy.

enVision Topic 5: Understand and Use Ratios and Rates | Spectrum companion Chapter 3

0–5 minutes / Launch

Read the target. Ask for an estimate or a sketch before calculating. Connect the new idea to the previous lesson.

5–17 / Model

Use Worked Example 1, then Example 2. Ask students to name the next step and explain a choice. Divide total cost by the number of items or units. Compare costs for exactly one of the same unit. A lower package price does not always give a lower unit price.

17–42 / Practice

Assign questions 1–10 in order. Use 1–3 for foundations, 4–7 for application, and 8–10 for state-format response and reasoning. The example button provides a separate question with a worked method.

42–50 / Discuss and check

Compare representations. Review a selected answer and a plausible error. Use question 10 as an exit discussion; ask students to check units, scale, or substitution.

Support and extension

Offer number lines, fraction strips, grid paper, or a table template as appropriate. Read multi-part directions one part at a time. For extension, ask for another representation or a counterexample.

Companion and state alignment

Use the matching skill in the edition you own. No unverified publisher page numbers are assigned. AASA references below identify related public sample items by standard and format; all course questions are original.

AASA sample item references: 2

Day 084 | Unit 06 | Lesson

Understand and Use Ratios and Rates

Compare Unit Rates and Prices

Standards: 6.RP.A.3b

Learning target: I can compare unit prices to find the better buy.

enVision Topic 5: Understand and Use Ratios and Rates | Spectrum companion Chapter 3

01 / Learn

Divide total cost by the number of items or units. Compare costs for exactly one of the same unit. A lower package price does not always give a lower unit price.

Worked example 1

Pack A has 2 markers for $4; Pack B has 4 markers for $10. Find each unit price and the better buy.

1. Divide total cost by the number of items or units.

2. Compare costs for exactly one of the same unit.

3. Divide each price by its marker count

4. compare 2 with 2.5.

5. State the result in the form requested: A $2/marker; B $2.5/marker; A is cheaper.

Answer: A $2/marker; B $2.5/marker; A is cheaper

Worked example 2

Store A sells 4 notebooks for $20. Store B sells 5 notebooks for $30. Part A: enter the unit price at each store. Part B: choose the better buy and explain why package totals alone are insufficient.

1. Divide total cost by the number of items or units.

2. Divide each cost by its own notebook count: 20/4 = 5

3. 30/5 = 6.

4. Compare the same one-notebook unit.

Answer: A: $5 each; B: $6 each; A is the better buy.

Day 084 | Your turn

Work in order: foundation → application → explanation. Show calculations and label units.

01 / Constructed response

Pack A has 4 markers for $16; Pack B has 7 markers for $31.5. Find each unit price and the better buy.

02 / Constructed response

Pack A has 3 markers for $24; Pack B has 5 markers for $42.5. Find each unit price and the better buy.

03 / Constructed response

Pack A has 5 markers for $20; Pack B has 9 markers for $40.5. Find each unit price and the better buy.

04 / Constructed response

Pack A has 2 markers for $3; Pack B has 5 markers for $10. Find each unit price and the better buy.

05 / Constructed response

Pack A has 5 markers for $5; Pack B has 7 markers for $10.5. Find each unit price and the better buy.

06 / Constructed response

Pack A has 2 markers for $8; Pack B has 6 markers for $27. Find each unit price and the better buy.

07 / Constructed response

Pack A has 4 markers for $4; Pack B has 9 markers for $13.5. Find each unit price and the better buy. How much would 36 markers cost using each pack size?

08 / Two-part numeric entry and reasoning

Store A sells 3 notebooks for $9. Store B sells 4 notebooks for $16. Part A: enter the unit price at each store. Part B: choose the better buy and explain why package totals alone are insufficient.

09 / Two-part numeric entry and reasoning

Store A sells 2 notebooks for $4. Store B sells 3 notebooks for $9. Part A: enter the unit price at each store. Part B: choose the better buy and explain why package totals alone are insufficient.

10 / Constructed response

Pack A has 5 markers for $15; Pack B has 11 markers for $38.5. Find each unit price and the better buy. How much would 55 markers cost using each pack size?

Day 084 | Unit 06 | Answer key

Understand and Use Ratios and Rates

Compare Unit Rates and Prices

Standards: 6.RP.A.3b

Learning target: I can compare unit prices to find the better buy.

1. A $4/marker; B $4.5/marker; A is cheaper

Divide each price by its marker count; compare 4 with 4.5.

6.RP.A.3b | Constructed response

2. A $8/marker; B $8.5/marker; A is cheaper

Divide each price by its marker count; compare 8 with 8.5.

6.RP.A.3b | Constructed response

3. A $4/marker; B $4.5/marker; A is cheaper

Divide each price by its marker count; compare 4 with 4.5.

6.RP.A.3b | Constructed response

4. A $1.5/marker; B $2/marker; A is cheaper

Divide each price by its marker count; compare 1.5 with 2.

6.RP.A.3b | Constructed response

5. A $1/marker; B $1.5/marker; A is cheaper

Divide each price by its marker count; compare 1 with 1.5.

6.RP.A.3b | Constructed response

6. A $4/marker; B $4.5/marker; A is cheaper

Divide each price by its marker count; compare 4 with 4.5.

6.RP.A.3b | Constructed response

7. A $1/marker; B $1.5/marker; A is cheaper; A $36, B $54

Divide each price by its marker count; compare 1 with 1.5.

6.RP.A.3b | Constructed response

8. A: $3 each; B: $4 each; A is the better buy.

Divide each cost by its own notebook count: 9/3 = 3; 16/4 = 4. Compare the same one-notebook unit.

6.RP.A.3b | Two-part numeric entry and reasoning

9. A: $2 each; B: $3 each; A is the better buy.

Divide each cost by its own notebook count: 4/2 = 2; 9/3 = 3. Compare the same one-notebook unit.

6.RP.A.3b | Two-part numeric entry and reasoning

10. A $3/marker; B $3.5/marker; A is cheaper; A $165, B $192.5

Divide each price by its marker count; compare 3 with 3.5.

6.RP.A.3b | Constructed response
