Fraction Operations and Models

Lesson 2 Mixed Number Products

Standards 6.NS.A.1

Learning target I can use fraction multiplication to prepare for fraction division.

Materials Fraction strips, blank fraction bars, pencils.

Lesson Flow 50 Minutes

0–5 Activate prior knowledge. Read the learning target. Ask students what they already know about mixed number products. Use a quick model or estimate to make their starting ideas visible.

5–17 Teach and model. For a product of fractions, multiply numerators and multiply denominators, then simplify. Convert mixed numbers to improper fractions first. Multiplying by a fraction less than 1 makes a positive quantity smaller. Work through the two examples on the attached instruction page. Have students name the first step before showing it.

17–22 Guided practice. Revisit worked Example 2 with its solution covered. Students propose the next step and explain why it is valid; uncover and compare with the worked solution.

22–45 Independent classwork. Assign the attached 10 questions in order. Check items 1–3 for entry-level understanding, 4–6 for connected procedures, 7–8 for representation and explanation, and 9–10 for application or justification. Ask students to use the instruction-page notes area or extra grids for longer work.

45–50 Check understanding. Use classwork question 10 as an exit discussion: Calculate 1 3/4 × 2 1/2. Simplify and explain why your answer is reasonable. Compare the result with the answer key and ask a student to defend the method.

Support and Extension

Support Model item 1 together with the listed tools, then have students attempt item 2 independently. Watch for taking the reciprocal of the dividend, confusing a partial group with a fraction of the whole, and rounding full-container counts upward.

Extension Ask students to solve a final item another way, draw a second representation, or create a related problem with a checked answer.

Next step Record which students can explain the target independently. Begin the next teaching session with a brief correction for any recurring error.

Lesson 2 Mixed Number Products

Standards 6.NS.A.1

Learning target I can use fraction multiplication to prepare for fraction division.

Learn and Discuss

For a product of fractions, multiply numerators and multiply denominators, then simplify. Convert mixed numbers to improper fractions first. Multiplying by a fraction less than 1 makes a positive quantity smaller.

Example 1 Calculate 2 1/4 × 2 1/4. Simplify.
Solution 81/16. 9/4 × 9/4 = 81/16.
Example 2 Calculate 1 1/2 × 2 1/4. Simplify and explain why your answer is reasonable.
Solution 27/8. 3/2 × 9/4 = 27/8.

Classwork Show Your Work

Complete the 10 problems on the following page. Refer to the examples, draw models, and check your results.

My Notes or Second Method

Lesson 2 Mixed Number Products

Name _____ Show calculations, models, and units.

1. Calculate 2 3/4 × 1 1/4. Simplify.

2. Calculate 2 1/4 × 2 1/4. Simplify.

3. Calculate 3 1/4 × 2 1/4. Simplify.

4. Calculate 2 1/2 × 2 1/2. Simplify.

5. Calculate 2 1/2 × 2 1/3. Simplify.

6. Calculate 1 3/4 × 2 1/4. Simplify.

7. Calculate 2 3/4 × 2 1/3. Simplify and explain why your answer is reasonable.

8. Calculate 3 1/4 × 1 1/2. Simplify and explain why your answer is reasonable.

9. Calculate 3 3/4 × 1 1/2. Simplify and explain why your answer is reasonable.

10. Calculate 1 3/4 × 2 1/2. Simplify and explain why your answer is reasonable.

Mixed Number Products

Fraction Operations and Models

1. 55/16
Reasoning 11/4 × 5/4 = 55/16.

2. 81/16
Reasoning 9/4 × 9/4 = 81/16.

3. 117/16
Reasoning 13/4 × 9/4 = 117/16.

4. 25/4
Reasoning 5/2 × 5/2 = 25/4.

5. 35/6
Reasoning 5/2 × 7/3 = 35/6.

6. 63/16
Reasoning 7/4 × 9/4 = 63/16.

7. 77/12
Reasoning 11/4 × 7/3 = 77/12.

8. 39/8
Reasoning 13/4 × 3/2 = 39/8.

9. 45/8
Reasoning 15/4 × 3/2 = 45/8.

10. 35/8
Reasoning 7/4 × 5/2 = 35/8.
